

# Operation manual of solar crack wish lamp

1. Pull out the bottle cap and you can see a pull-off switch. This switch is turned to on direction. The switch only needs to be opened once. It will automatically turn off in the daytime and light automatically at night. The sensitive setting can be on only when the solar panel is covered by hand during the day.

2. The light string is scattered evenly in the bottle, and the protective film on the solar energy is torn off. The solar panel can change the absorption of sunlight. The solar energy must be installed in the place where the sunlight can be directly exposed, and there is no shelter to avoid affecting the normal use of the solar panel. The normal charging time is 6-8 hours.

3. The hook at both ends of the rope can be removed and it is more convenient to install.

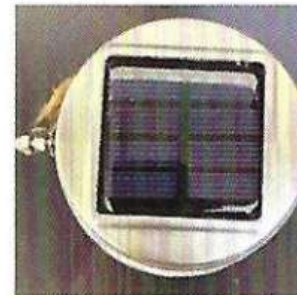

## Product details
